(a)
local slope [decades / qubit]
window centre $n$ (3-point windows)
p = 0
p = 0.0001
p = 0.001
p = 0.01
p = 0.1
Loschmidt $b_{\mathrm{LE}}$
SWAP $b_{\mathrm{SWAP}}$
$\log_{10} 16$
$\log_{10} 8$
$\log_{10} 4$
(b)
exponent ratio $b_{\mathrm{SWAP}}/b_{\mathrm{LE}}$
depolarizing strength $p$
B1 entangling cells, global
RX, global ($n \geq 8$)
RX, global (n = 2-20)
Prop. 5 asymptote (RX)
RX, local ($n \geq 8$)
2
4/3
(c)
$b_S'$ [decades / qubit]
local depolarizing strength $p$
Proposition 6
measured ($n \geq 8$)
measured (n = 2-20)
(d)
crossover $n^*$
global depolarizing strength $p$
B1 entangling cells
RX product
